# Installing eWebEditPro Core Files

1. Download the ewebeditprocore.zip file.
2. Create a new directory named `mywebsite.com/ewebeditpro`.
3. Unzip the ewebeditprocore.zip file to the `mywebsite.com/ewebeditpro` directory.

The unzip action creates three new directories

- `mywebsite.com/ewebeditpro/clientinstall`
- `mywebsite.com/ewebeditpro/html/languages`
- `mywebsite.com/ewebeditpro/html/xhtml`

Do not change the directory structure.

To test the installation, click on `mywebsite.com/ewebeditpro/test.htm`. If you see an editor on the page, the install was successful.

## Updating License Keys

To update your license key information, open `mywebsite.com/ewebeditpro/ewebeditpro.js`, and change the text within quotes that follows `var LicenseKeys = .`

## Updating the Location of eWebEditPro

To change the location of **eWebEditPro**, open `mywebsite.com/ewebeditpro/ewebeditpro.js`, and enter the new path following `var eWebEditProPath = .` Enter the path relative to the host name.

The default location is `"/ewebeditpro/"`.
